

# Contents

I Axioms and classes	
1 Classes, sets and	1
2 Constructing classes, sets	13
II Class operations	23
3 Operations on classes, sets . . . . .	25
4 Cartesian products . . . . .	34
III Relations	43
5 Relations on a class or . . . . .	45
6 Equivalence relations and order . . . . .	51
7 Partitions induced by equivalence . . . . .	62
8 Equivalence classes, quotient sets . . . . .	68
IV Functions	75
9 Functions: A set-theoretic definition . . . . .	77
10 Operations on functions . . . . .	85
11 Images and preimages of . . . . .	93
12 Equivalence relations induced by functions . . . . .	98
V From sets to numbers	105
13 The natural . . . . .	107
14 The natural numbers as a well-ordered set . . . . .	124
15 Arithmetic of the natural numbers . . . . .	134
16 The integers $\mathbb{Z}$ and the rationals . . . . .	144
17 Dedekind cuts: “Real numbers are us!” . . . . .	154
VI Infinite sets	165
18 Infinite sets versus finite . . . . .	167
19 Countable and uncountable . . . . .	179
20 Equipotence as an equivalence . . . . .	189
21 Schröder-Bernstein theorem. . . . .	204
VII Cardinal numbers	211
22 An introduction to cardinal numbers. . . . .	213

23	Addition and multiplication in C . . . . .	222
24	Exponentiation of cardinal numbers. . . . .	229
25	On sets of cardinality $c$ . . . . .	238
<b>VIII</b>	<b>Ordinal numbers</b>	<b>249</b>
26	Well-ordered . . . . .	251
27	Ordinal numbers: Definition and properties. . . . .	266
28	Properties of the class of ordinal . . . . .	283
29	Initial ordinals: “Cardinal numbers are us!” . . . . .	302
<b>IX</b>	<b>More on axioms: Choice, regularity and Martin’s axiom</b>	<b>327</b>
30	Axiom of choice . . . . .	329
31	Regularity and the cumulative hierarchy . . . . .	340
32	Martin’s axiom . . . . .	361
<b>X</b>	<b>Ordinal arithmetic</b>	<b>369</b>
33	Ordinal arithmetic: Addition. . . . .	371
34	Ordinal arithmetic: Multiplication and Exponentiation. . . . .	379
Appendix A:	Boolean algebras and Martin’s axiom. . . . .	391
Appendix B:	List of definitions and statements. . . . .	405
